

ADC Private Constants

ADC sampling times
all channels

```
graph RL; A[ADC sampling times all channels] --> B[ADC Private Constants];
```

The diagram consists of two rectangular boxes connected by a horizontal arrow pointing from right to left. The box on the right is shaded gray and contains the text 'ADC sampling times all channels'. The box on the left is white with a black border and contains the text 'ADC Private Constants'. The arrow indicates that the sampling times for all channels are used to determine the private constants for the ADC.
